

CSEA2

TITLE :Write a Java program to demonstrate the use of the super keyword in inheritance.

```
X1.java 1    J ASS5EX2.java 3    J AS6EX1.java 2    J ShapeDer
J Manager.java > Manager
1  class Employee {
2      String name = "Rahul";
3      int empId = 101;
4  }
5
6  class Manager extends Employee {
7
8      void display() {
9          System.out.println("Employee Name: " + super.name);
10         System.out.println("Employee ID: " + super.empId);
11     }
12
13     Run main | Debug main
14     public static void main(String[] args) {
15         Manager m = new Manager();
16         m.display();
17     }
```

OUTCOME-

```
PROBLEMS 12 OUTPUT DEBUG CONSOLE TERMINAL PORTS

Employee Name: Rahul
Employee ID: 101
```

2. Develop a **Vehicle Insurance System** where child insurance classes access parent vehicle information using the super keyword.

```
X1.java 1  J ASS5EX2.java 3  J AS6EX1.java 2  J ShapeDer  ||  ↕  ⬇  ⬆  ↻  □  va  J

J AS7EX2.java > AS7EX2
1  class Vehicle {
2      String name = "Car";
3      String model = "Toyota";
4
5      Vehicle() {
6          System.out.println("Vehicle Information");
7      }
8  }
9      class Insurance
        extends Vehicle
10 class Insurance extends Vehicle {
11     String policy = "Comprehensive";
12
13     Insurance() {
14         super(); // Calls the parent constructor
15     }
16
17     void display() {
18         System.out.println("Vehicle Name: " + super.name);
19         System.out.println("Vehicle Model: " + super.model);
20         System.out.println("Insurance Policy: " + policy);
21     }
22 }
23
24 public class AS7EX2 {
25     Run main | Debug main
26     public static void main(String[] args) {
27         Insurance obj = new Insurance();
28         obj.display();
29     }
}
```

OUTPUT-

```
PROBLEMS 12 OUTPUT DEBUG CONSOLE TERMINAL PORTS

Vehicle Information
Vehicle Name: Car
Vehicle Model: Toyota
Insurance Policy: Comprehensive
```

Conclusion

The program was successfully implemented to demonstrate the use of the **super** keyword in Java inheritance. It showed how **super** can be used to access parent class variables, invoke parent class constructors, and call parent class methods. This practical helped in understanding constructor chaining, method overriding, and the relationship between parent and child classes, thereby strengthening the concepts of inheritance in Java.
